

NOTES ON THE NORTHSTAR ADVANTAGE FLOPPY DISK IMAGE FILES

1. All Northstar Advantage NSI image files in this directory boot to Graphics CP/M vers 2.2 A for Advantage QD from Northstar Computers. Settings:
64 KB ram, 2 floppy disk drives, serial port 9600 baud, QD, fast stepping.
2. Most software is adopted to the Northstar Advantage by using:
 - a. the video driver codes
 - b. the cursor and function keys
 - c. specific IO ports
 - d. graphic capabilities of the Advantage computer
3. Most programs have a German UI.
4. „ GrafikInterface.NSI“ contains the program „GRAFIK.COM“ that loads as an extra layer to CP/M. After loading this layer, programs can generate graphics by printing strings which begin with an ESC sequence („print chr\$(27) 'A' 123 213 234 434“). Examples in: „Basic Progs.NSI“: KARDIOID.BAS or ECKEN.BAS, „DBase.NSI“ : DEMO.CMD

5. Content of the images:
 - a. „DemoDiagnostic 2.0.0AQH.NSI“
DemoDiagnostic disk for the 1981 Advantage computer

- b. „GrafikInterface.NSI“
Graphic layer as add-on to Advantage Graphics CP/M
- c. „Invader.NSI“
An invader clone for the Advantage running under CP/M
